About Me

Proven IT professional with CompTIA Network+, Security+, Cloud+, and Linux+, certifications. I am currently pursuing an Information Systems bachelor's degree at Purdue University Fort Wayne, with hybrid classes scheduled outside of business hours to allow full availability. I bring relevant professional experience from a **IT Help Desk position at Deister Machine Company** and **IT Technician position at M6 Networks**, as well as shadowing a Systems Administrator at Deister Machine, giving me hands-on exposure to enterprise IT operations.

Technical Background:

- **Systems Administration:** Linux and Windows administration, Azure Active Directory, Windows Server, hypervisors, group policy, domain configurations, system imaging, and user account management for 300+ users.
- **Networking & Security:** Firewall systems, Cisco technologies, AWS cloud services, and an understanding of cybersecurity concepts such as penetration testing and secure configurations.
- **Deployment & Tools:** MDT, PDQ, and help desk ticketing systems.
- **Programming & Development:** Python, .NET Framework, Java, C/C++, and React.
- **Home Lab Projects:** Designed and managed a lab environment mirroring both small and large user business network to practice administration, test new solutions, and create problem-solving tools that improve efficiency and reliability.

Alongside technical expertise, I bring problem-solving ability, clear communication, adaptability, documentation skills, and a strong focus on aligning IT solutions with business needs. I am passionate about IT, highly motivated to learn on the go, and committed to growing into a Systems or Network Administrator role.
